Stage 4: Development Stage – Building the Startup Product

The Development Stage is where a validated startup idea is transformed into a working product or service. During this phase, founders focus on product design, software or hardware development, testing, quality assurance, and preparing the product for launch. The objective is to deliver a reliable solution that satisfies customer needs while remaining scalable and cost-effective.

BELVO

1. Introduction to the Development Stage

Understand the purpose and goals of product development. Discuss practical implementation methods, real-world startup examples, common development challenges, project management techniques, and recommendations for creating a reliable, user-friendly, and scalable product. Continuous iteration and collaboration are essential throughout the development process.
